20	J_Battery	Connx2_Battery	No component										

*Importance: Refers to the importance of using the designated component and not a default replacement		This is a critical device and was specially calculated, it should not be exchanged for any device. In case of not obtaining this device, please contact the design engineer.
		If possible, use the supplied device. In case there is difficulty in obtaining it, you can use another one with similar characteristics, but as long as the device has a complete datasheet where its parameters can be consulted.
		This is a regular device and you can choose the device that suits you.
